LIVESTOCK MANAGEMENT

Mineral Supplementation for Dairy and Beef Animals

Why minerals matter for milk, fertility and growth, and how to choose the right supplement.

Pasture and fodder rarely supply all the minerals and trace elements animals need. Shortfalls show up as poor fertility, weak bones, low milk yields and slow growth.

Dairy cows

Sidai Dairy Minerals are targeted at bulling heifers and lactating cows. They support milk production and pronounced heat signs, and help prevent milk fever, depraved appetite and retained placenta. Sidai Dairy Mineral Block offers the same purpose in a lick-block format.

Beef cattle, sheep and goats

Sidai Beef Minerals provide minerals and trace elements for body maintenance, growth and disease resistance, strong bone structure, more kids and lambs per year and excellent meat quality.

Camels

Sidai Camel Minerals are formulated for high-yielding camels and are available through our northern hubs.

Good practice

- Provide minerals every day, not only when problems appear.
- Choose the product made for your animals: dairy, beef, small stock or camels.
- Keep minerals dry and protected from rain.
- Follow the feeding rate on the pack.

This guide gives general information. Always read and follow product labels, and ask a qualified Sidai vet or agronomist for advice on your own animals or crops. Online version: sidai.com/resources/guides/minerals-for-dairy-and-beef
